Exam Questions OGEA-101

TOGAF Enterprise Architecture Part 1 Exam (English)

NEW QUESTION 1
Which of the following best describes a purpose of the Gap Analysis technique?

A. To validate non-functional requirements
B. To establish quality metrics for the architecture
C. To determine service levels for the architecture
D. To identify missing functions

Answer: D

Explanation:
Gap analysis is a technique that is used to validate an architecture by highlighting the shortfall between the Baseline Architecture and the Target Architecture. One of the purposes of gap analysis is to identify missing functions that are either deliberately omitted, accidentally left out,or not yet defined in the Target Architecture. Missing functions are marked as gaps that need to be filled by developing or procuring the building blocks.

NEW QUESTION 2
Which section of the TOGAF template for Architecture Principles should describe the relationship to other principles?

A. Name
B. Rationale
C. Statement
D. Implications

Answer: B

Explanation:
According to the TOGAF template for Architecture Principles, the Rationale section should describe the relationship to other principles, as well as the business benefits and the intentions of adhering to the principle. The Rationale section should use business terminology and point to the similarity of information and technology principles to the principles governing business operations. The Rationale section should also explain how the principle supports the achievement of the business objectives and key architecture drivers. References:
? Architecture Principles Template
? The TOGAF Standard, Version 9.2 - Architecture Principles
? The Open Group Exam OGEA-103 Topic 1 Question 4 Discussion

NEW QUESTION 3
Consider the illustration.

What are the items labelled A, B and C?

A. A-Enterprise Continuum, B-Architecture Continuum, C-Solutions Continuum
B. A-Enterprise Architecture, B-Architecture Building Blocks, C-Solutions Building Blocks
C. A-Architecture Vision, B-Business Architecture, C-Information Systems Architecture
D. A-Enterprise Strategic Architecture, B-Segment Architecture, C-Solutions Architecture

Answer: A

Explanation:
The illustration shows the relationship between the Enterprise Continuum, the Architecture Continuum, and the Solutions Continuum, which are key concepts in the TOGAF framework. TheEnterprise Continuum is a view of the Architecture Repository that shows how generic foundation architectures can be leveraged and specialized to support the requirements of an individual organization. The Architecture Continuum specifies a structured classification for architectural artifacts,

such as models, patterns, and descriptions, that can be reused and adapted across different domains and levels of abstraction. The Solutions Continuum identifies implemented solutions that support various stages of business and IT capability evolution, such as common systems, industry solutions, and organization-specific solutions. The illustration also shows how the architecture context and requirements are influenced by external factors, such as business drivers, stakeholders, and standards, and how they shape the generic and specific architectures and solutions. The illustration also shows how the deployed solutions become part of the architecture context for future iterations of the architecture development cycle. References:
• TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 6: Architecture Repository, Section 6.2 Enterprise Continuum.
• TOGAF Standard, 10th Edition, Part IV: Architecture Content Framework, Chapter 35: Enterprise Continuum and Tools, Section 35.1 Introduction.

NEW QUESTION 4
Which of the following is the ability to develop use and sustain the architecture of a particular enterprise using architecture to govern change?

A. An EA Capability
B. An EA repository
C. An EA framework
D. An Enterprise Architecture

Answer: A

Explanation:
The ability to develop, use, and sustain the architecture of a particular enterprise using architecture to govern change is an EA Capability. An EA Capability is a set of skills, processes, roles, responsibilities, tools, and techniques that enable an enterprise to successfully develop and maintain its Enterprise Architecture and achieve its desired outcomes. An EA Capability is part of an enterprise??s overall capability portfolio and should be aligned with its strategy and objectives. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 Preliminary Phase.

NEW QUESTION 5
Complete the sentence The purpose of the Preliminary Phase is to _____.

A. describe the target architecture
B. define the enterprise strategy
C. identify the stakeholders and their requirements
D. architect an Enterprise Architecture Capability

Answer: D

Explanation:
The purpose of the Preliminary Phase is to architect an Enterprise Architecture Capability that meets the needs and expectations of the enterprise??s stakeholders and supports and enables subsequent phases of architecture development and transition. This phase involves defining the scope, principles, framework, and governance for the Enterprise Architecture Capability. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 Preliminary Phase.

NEW QUESTION 6
What is used to structure architectural information in an orderly way so that it can be processed to meet stakeholder needs?

A. A Stakeholder Map
B. An Architecture Framework
C. Content Metamodel
D. An EA Library

Answer: C

Explanation:
? A content metamodel is a formal structure that defines the types of entities and relationships that are used to capture, store, filter, query, and represent architectural information in a way that supports consistency, completeness, and traceability12.
? A stakeholder map is a tool that identifies and analyzes the key stakeholders and their interests, influence, and expectations in relation to the architecture3. It is not used to structure architectural information, but rather to understand the stakeholder needs and concerns.
? An architecture framework is a set of principles, guidelines, standards, and tools that provide a common structure and methodology for developing architectures4. It is not used to structure architectural information, but rather to guide the architecture development process and ensure alignment with the business strategy and objectives.
? An EA library is a repository that stores and manages the architecture artifacts, deliverables, and other relevant information produced and consumed during the architecture development and governance. It is not used to structure architectural information, but rather to provide access, security, and version control for the architecture content.
References: 1: The TOGAF Standard, Version 9.2 - Content Metamodel 2: TOGAF 9.2 Content Metamodel Framework - A Quick Guide - KnowledgeHut 3: The TOGAF Standard, Version 9.2 - Stakeholder Management 4: The TOGAF Standard, Version 9.2 - Architecture Framework : The TOGAF Standard, Version 9.2 - Architecture Repository

NEW QUESTION 7
What are the four architecture domains that the TOGAF standard deals with?

A. Business, Data, Application, Technology
B. Capability, Segment, Enterprise, Federated
C. Baseline, Candidate, Transition, Target
D. Application, Data, Information, Knowledge

Answer: A

Explanation:
The TOGAF standard divides Enterprise Architecture into four primary architecture domains: business, data, application, and technology. These domains represent different aspects of an enterprise and how they relate to each other. The business domain defines the business strategy, governance, organization, and key business processes. The data domain describes the structure of the logical and physical data assets and data management resources. The application domain

provides a blueprint for the individual applications to be deployed, their interactions, and their relationships to the core business processes. The technology domain describes the logical software and hardware capabilities that are required to support the deployment of business, data, and application services. Other domains, such as motivation, security, or governance, may span across these four primary domains. References:
? The TOGAF Standard, Version 9.2 - Core Concepts
? Domains - The Open Group
? TOGAF® Standard — Introduction - Definitions - The Open Group
? The TOGAF Standard, Version 9.2 - Definitions - The Open Group

NEW QUESTION 8
According to the TOGAF standard, what term describes an individual with an interest in a system?

A. stakeholder
B. consumer
C. lead architect
D. sponsor

Answer: A

Explanation:
According to the TOGAF Standard, 10th Edition, a stakeholder is ??an individual with an interest in a system?? 1. A stakeholder can be anyone who is affected by the system, or who can influence or be influenced by the system. Stakeholders can have different roles, perspectives, and concerns regarding the system, and they can be internal or external to the organization. Stakeholder management is a technique that helps to identify, analyze, and engage the stakeholders of an architecture project, and to address their needs and expectations 2. The other options are not correct, as they are not the term used by the TOGAF Standard to describe an individual with an interest in a system. A consumer is ??an individual or group that uses a product or service?? 1. A lead architect is ??an individual who is responsible for leading the development of an architecture?? 1. A sponsor is ??an individual who provides funding and support for an architecture project?? 1. References: 1: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions. 2: TOGAF Standard, 10th Edition, Part III: ADM Guidelines and Techniques, Chapter 24: Stakeholder Management.

NEW QUESTION 9
Which of the following describes the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level?

A. Corporate governance
B. Architecture governance
C. IT governance
D. Technology governance

Answer: B

Explanation:
According to the TOGAF Standard, 10th Edition, architecture governance is ??the practice by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level?? 1. Architecture governance ensures that the architecture development and implementation are aligned with the strategic objectives, principles, standards, and requirements of the enterprise, and that they deliver the expected value and outcomes. Architecture governance also involves establishing and maintaining the architecture framework, repository, board, contracts, and compliance reviews 1. The other options are not correct, as they are not the term used by the TOGAF Standard to describe the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level. Corporate governance is ??the system by which an organization is directed and controlled?? 2, and it covers aspects such as leadership, strategy, performance, accountability, and ethics. IT governance is ??the system by which the current and future use of IT is directed and controlled?? 2, and it covers aspects such as IT strategy, policies, standards, and services. Technology governance is ??the system by which the technology decisions and investments are directed and controlled?? 3, and it covers aspects such as technology selection, acquisition, deployment, and maintenance. References: 1: TOGAF Standard, 10th Edition, Part VI: Architecture Governance, Chapter 44: Introduction. 2: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions. 3: TOGAF Series Guide: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Part II: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Chapter 5: Technology Governance.

NEW QUESTION 10
Which of the following is included as part of Architecture Governance1?

A. Ensuring compliance with internal and external standards and regulatory obligations
B. Creating and maintaining the Statement of Architecture Work though out the ADM cycle
C. Managing Stakeholders and their requirements
D. Interacting with the CxO level on Enterprise Architecture

Answer: A

Explanation:
Ensuring compliance with internal and external standards and regulatory
obligations is one of the activities included as part of Architecture Governance. Architecture Governance is the practice and orientation by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level. It involves establishing processes, roles, responsibilities, policies, and standards to ensure that architectures are aligned with the enterprise??s strategy and objectives, and meet the quality and performance requirements. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.6 Architecture Governance.

NEW QUESTION 10
Exhibit:

Consider the image showing basic architectural concepts. What are items A and B?

A. A-Candidate Architecture, B-Trade-off
B. A-User, B-Requirement
C. A-Stakeholder, B-Concern
D. A-Base Architecture, B-Target Architecture

Answer: C

Explanation:
 In the context of TOGAF, a stakeholder is any individual, team, or
organization who has interests in, or concerns relative to, the outcome of the architecture. Concerns are those interests which pertain to any aspect of the
system??s functioning, development or operation, including considerations such as performance, reliability, and security1. References:
•The TOGAF Standard, Version 9.2 - Definitions - The Open Group

NEW QUESTION 14
Complete the sentence. When considering agile development, Architecture to Support Portfolio will identify what products the Enterprise needs, the boundary of
the products, and what constraints a product owner has; this defines the Enterprise's

A. risk tolerance
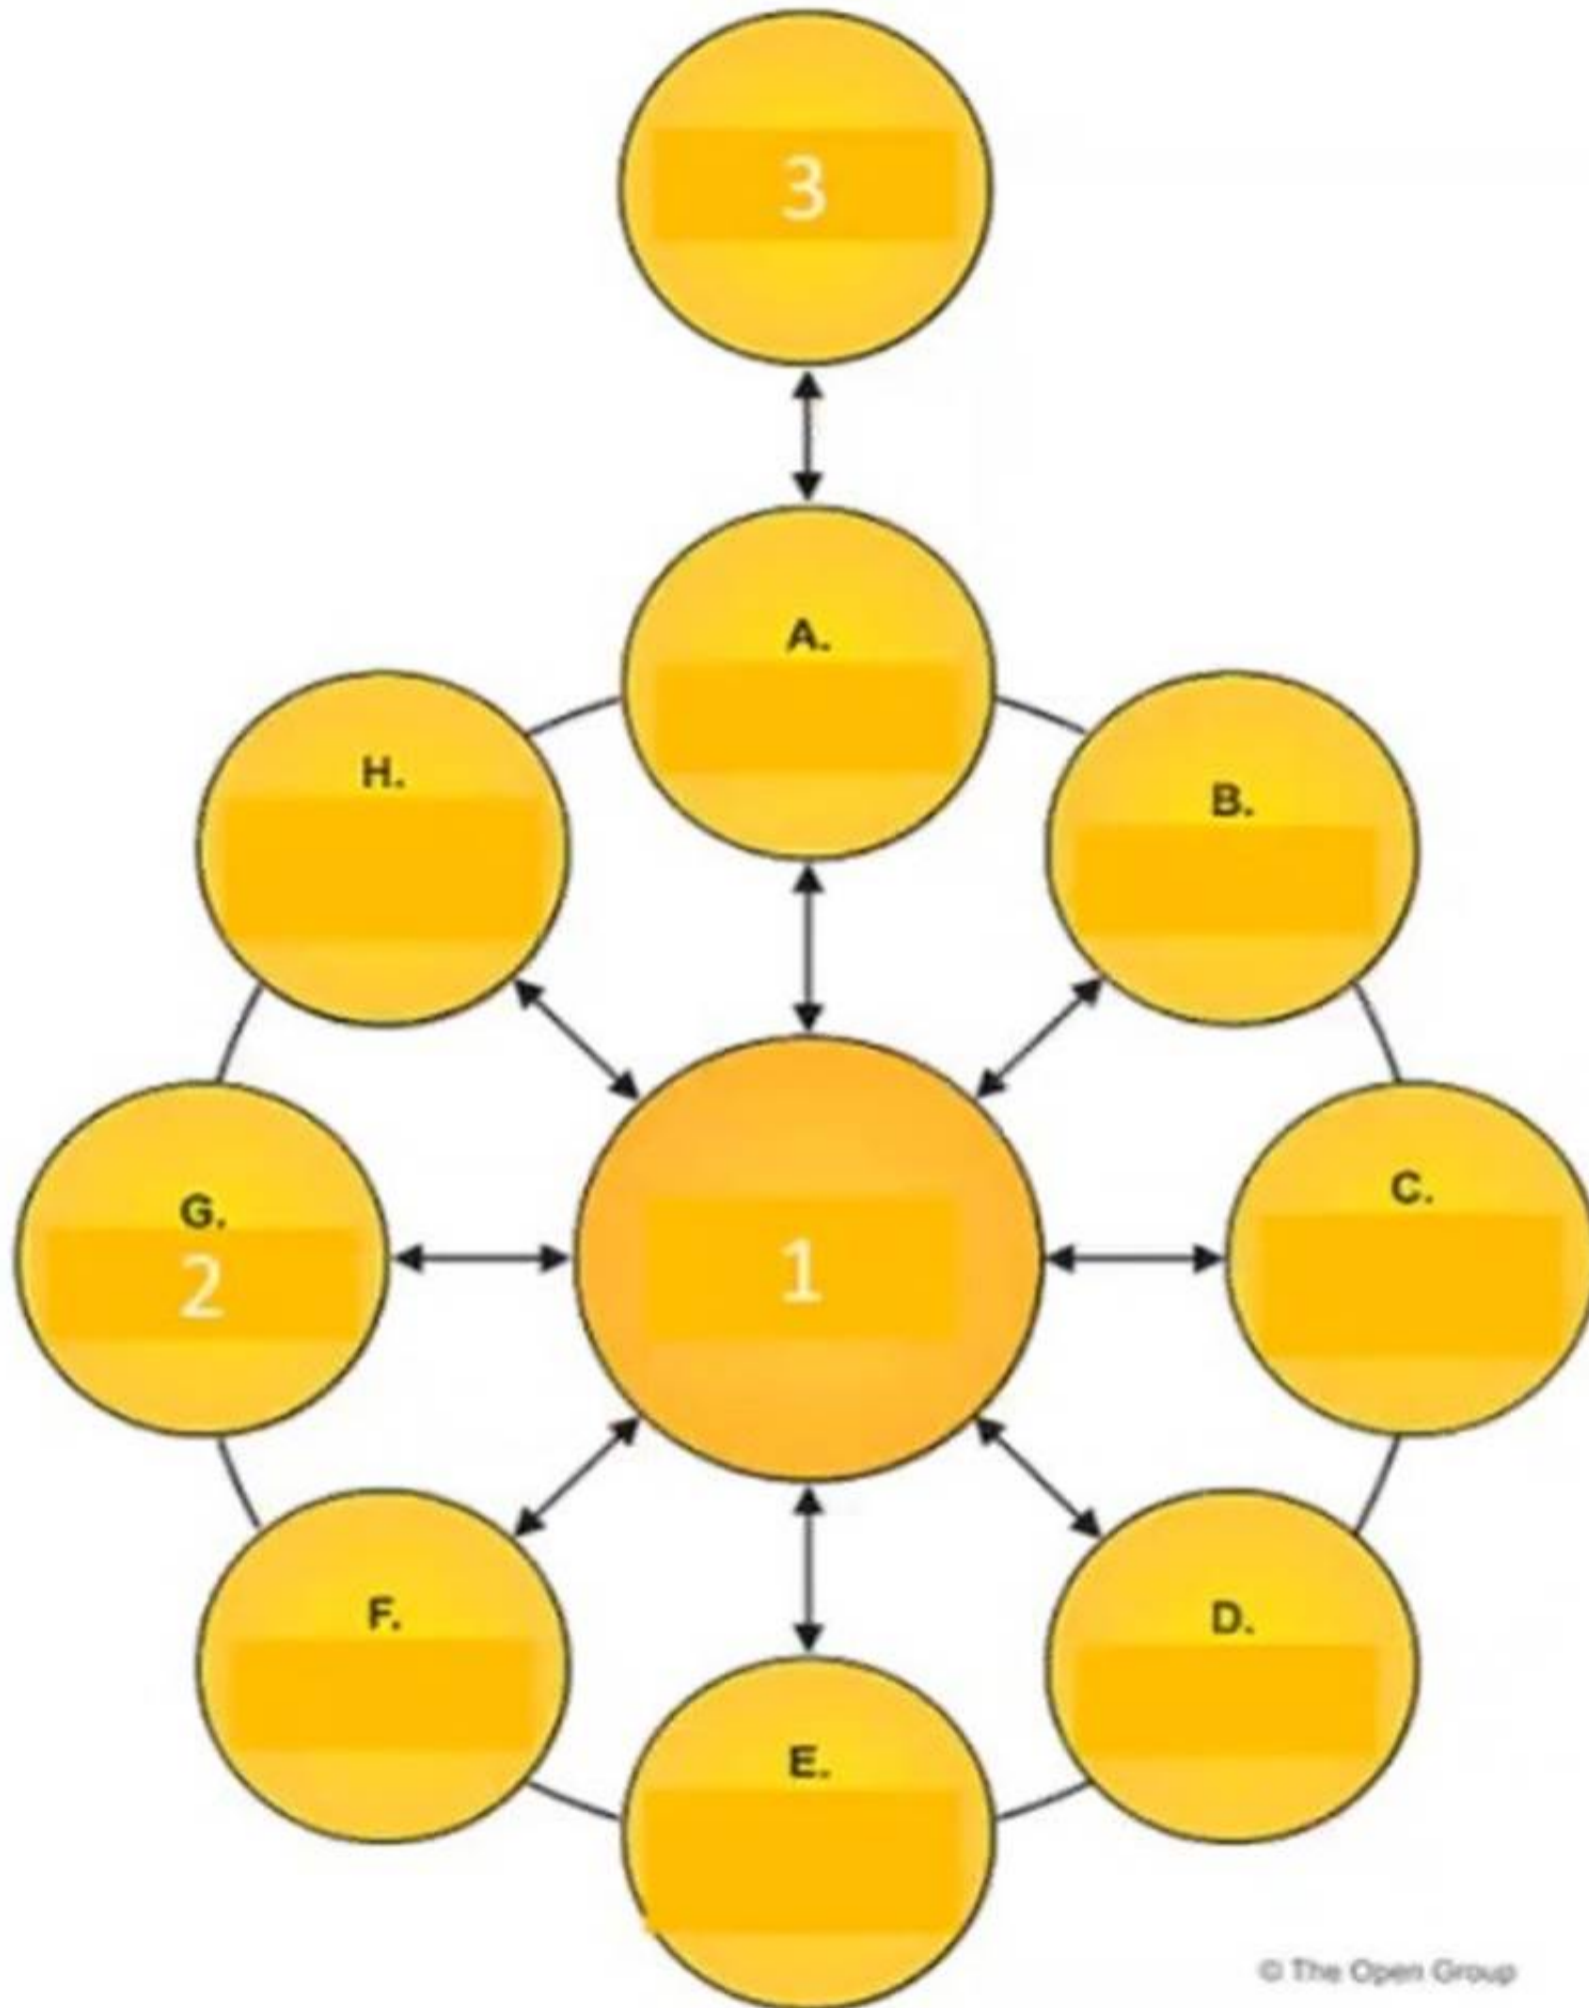

B. business continuity
C. backlog
D. operating model

Answer: C

Explanation:
 When considering agile development,Architecture to Support Portfoliowill identify the necessary products for the enterprise, define their boundaries, and outline the constraints for a product owner. This process directly relates to defining the enterprise'sbacklog, which in agile methodologies, is a prioritized list of work for the development team that is derived from the roadmap and its requirements.

NEW QUESTION 19
Exhibit

© The Open Group

Consider the illustration showing an architecture development cycle Which description matches the phase of the ADM labeled as item 2?

A. Conducts implementation planning for the architecture defined in previous phases
B. Establishes procedures for managing change to the new architecture
C. Operates the process of managing architecture requirements
D. Provides architectural oversight for the implementation

Answer: D

Explanation:

Based on the illustration, the phase of the ADM labeled as item 2 is the Implementation
Governance phase. This phase provides architectural oversight for the implementation. It ensures that the implementation project conforms to the architecture. It also provides a framework for monitoring and managing the implementation.
The Implementation Governance phase involves the following activities:
? Finalizing the Architecture Roadmap and the supporting Implementation and Migration Plan
? Assigning an Architecture Board to oversee the implementation
? Establishing Architecture Contracts with the implementation partners
? Reviewing and approving the implementation project plans and deliverables
? Performing Architecture Compliance reviews to ensure alignment with the architecture
? Performing Architecture Audit reviews to ensure quality and performance of the architecture
? Resolving any architecture issues or change requests that arise during the implementation
? Maintaining the architecture lifecycle and ensuring its continuity
The Implementation Governance phase is essential for ensuring that the architecture is realized as intended and that it delivers the expected business value and outcomes. References: : Implementation Governance

NEW QUESTION 20
Complete the sentence The TOGAF standard covers the development of four architecture
domains. Business. Data, Technology and .

A. Segment
B. Transition
C. Capability
D. Application

Answer: D

Explanation:
The TOGAF standard covers the development of four architecture domains: Business, Data, Technology and Application. These domains represent different aspects of an enterprise??s architecture and provide a consistent way of describing, analyzing, and designing them. Reference: The TOGAF® Standard | The Open Group Website, Section 2.2 Architecture Development Method (ADM).

NEW QUESTION 25
Complete the following sentence. In the ADM documents which are under development and have not undergone any formal review and approval process are .

A. Called ????draft????
B. Invalid
C. In between phases
D. Known as ????Version 0.1????

Answer: A

Explanation:
In the ADM documents which are under development and have not undergone any formal review and approval process are called ??draft??. This indicates that they are subject to change and refinement as the architecture development progresses. Reference: The TOGAF® Standard | The Open Group Website, Section 4.2.5 Architecture Deliverables.

NEW QUESTION 29
What is an objective of the ADM Implementation Governance Phase?

A. To provide continual monitoring of the governance framework
B. To ensure conformance for the target architecture
C. To finalize the Implementation and Migration Plan
D. To establish the resources for architecture governance

Answer: B

Explanation:
The objective of the ADM Implementation Governance Phase is to provide an architectural oversight of the implementation and to ensure conformance for the target architecture. This phase involves establishing procedures and processes to monitor and control the implementation projects and to verify that they comply with the defined architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2.7 Phase G: Implementation Governance.

NEW QUESTION 34
Consider the following descriptions of deliverables consumed and produced across the TOGAF ADM cycle.

1	General rules and guidelines, intended to be enduring and seldom amended, that inform and support the way in which an organization sets about fulfilling its mission
2	A set of quantitative statements that outline what an implementation project must do in order to comply with the architecture.
3	A document that is sent from the sponsoring organization to the architecture organization to trigger the start of an architecture development cycle
4	The scope and approach that will be used to complete an architecture development cycle

Which deliverables match these descriptions?

A. 1 Architecture Requirements Specification - 2 Request for Architecture Work - 3 Statement of Architecture Work - 4 Architecture Principles
B. 1 Statement of Architecture Work - 2 Architecture Principles - 3 Architecture Requirements Specification - 4 Request for Architecture Work
C. 1 Architecture Principles - 2 Architecture Requirements Specification - 3 Request for Architecture Work - 4 Statement of Architecture Work
D. 1 Request for Architecture Work - 2 Statement of Architecture Work - 3 Architecture Principles - 4 Architecture Requirements Specification

Answer: D

Explanation:
The Request for Architecture Work is a deliverable that is sent from the sponsor and triggers the start of an architecture development cycle. It defines the scope, budget, schedule, and deliverables for a specific architecture project. The Statement of Architecture Work is a deliverable that is produced by the architect and defines the approach and resources needed to complete an architecture project. It forms the basis of a contractual agreement between the sponsor and the architecture organization. The Architecture Principles are a deliverable that is produced by the architect and defines the general rules and guidelines for the architecture work. They reflect the business principles, business goals, and business drivers of the organization. The Architecture Requirements Specification is a deliverable that is produced by the architect and defines the requirements that govern the architecture work. It covers both functional and non-functional requirements as well as constraints and assumptions.

NEW QUESTION 39
Complete the sentence A business scenario describes

A. shortfalls between the Baseline and Target Architectures
B. business domain gaps such as cross-training requirements
C. business and technology environment in which those problems occur
D. general rules and guidelines tor the architecture being developed

Answer: C

Explanation:
A business scenario describes business and technology environment in which those problems occur. It provides a realistic context for identifying and addressing business problems and opportunities, as well as their impact on the enterprise??s architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.1 Business Scenarios.

NEW QUESTION 43
In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

A. Phases G and H
B. Phases F
C. Phases B C and D
D. Phase E

Answer: D

Explanation:
In Phase E of the ADM cycle, building block gaps become associated with work packages that will address the gaps. This phase involves creating an Implementation and Migration Plan that defines a set of work packages and Transition Architectures that will deliver the Target Architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2.5 Phase E: Opportunities & Solutions.

NEW QUESTION 44
Which of the following is a responsibility of an Architecture Board?

A. Determining the scope of an architecture compliance review
B. Allocating resources for architecture projects
C. Conducting assessments of the maturity level of architecture discipline within the organization
D. Achieving consistency between sub-architectures

Answer: D

Explanation:
One of the key responsibilities of an Architecture Board within the context of TOGAF is to achieve consistency between sub-architectures. This board is typically responsible for overseeing the development and maintenance of the enterprise architecture, ensuring that it aligns with the organization's overall strategy and objectives. They play a critical role in ensuring that all sub-architectures (like Business Architecture, Data Architecture, Application Architecture, and Technology Architecture) work together cohesively and support the overall enterprise architecture vision and strategy.
