Exam Questions MS-700

Managing Microsoft Teams

NEW QUESTION 1

- (Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.

You need to prevent guest users in the tenant from using cameras during Microsoft Teams meetings.

Solution: From Microsoft Teams admin center, you modify the External collaboration settings.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

<https://docs.microsoft.com/en-us/microsoftteams/set-up-guests>

NEW QUESTION 2

- (Topic 5)

Your company has a Microsoft 365 subscription.

All users have computers that run Windows 10. The computers are joined to Azure Active Directory (Azure AD) and enrolled in Microsoft Intune. All the users are standard users.

The company plans to start using Microsoft Teams.

You need to deploy the Microsoft Teams client to the computers. What should you use?

- A. an Azure AD app registration
- B. a domain-based Group Policy Object (GPO)
- C. Azure App Service
- D. an app in Microsoft Intune

Answer: D

Explanation:

NEW QUESTION 3

- (Topic 5)

Your company has a Microsoft subscription.

The Microsoft 365 tenant uses a domain named contoso.com.

You need to ensure that team channels can receive email only from users in the company

and email addresses that use an email domain named @fabrikam.com. What should you modify?

- A. the External collaboration settings in the Azure Active Directory admin center
- B. the list of accepted domains in Microsoft Exchange Online
- C. the org-wide Teams settings
- D. the global teams policy

Answer: C

NEW QUESTION 4

- (Topic 5)

You have a Microsoft 365 E3 subscription that contains 500 users. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to generate a report that identifies which documents the users copied from Microsoft Teams to USB devices.

What should you do first?

- A. Onboard the Windows 10 computers to Endpoint data loss prevention (Endpoint DLP).
- B. Assign the Microsoft 365 ES compliance add-on to each user.
- C. Create a custom data loss prevention (DLP) policy.
- D. Assign the Enterprise Mobility + Security ES add-on to each user.

Answer: B

Explanation:

According to the Microsoft documentation¹, to generate a report that identifies which documents the users copied from Teams to USB devices, you need to use advanced hunting on Microsoft Defender ATP. Advanced hunting lets you run queries to find threat activity involving USB devices, such as mounting and unmounting of USB drives or copying of files².

To use advanced hunting, you need to have one of the following roles:

- ? Security administrator
- ? Security reader
- ? Security operator
- ? Global administrator

The Groups Administrator role does not have access to advanced hunting or Microsoft Defender ATP.

Therefore, based on this information, the correct answer is B. Assign the Microsoft 365 E5 compliance add-on to each user. This add-on includes Microsoft Defender ATP and allows you to use advanced hunting features³. Alternatively, you can request one of the roles that have access to advanced hunting, such as Security administrator or Global administrator.

NEW QUESTION 5

- (Topic 5)

You have a Microsoft 365 E5 subscription that uses Microsoft Teams.

Users report that their presence information is available to external partners.

You need to ensure that the presence information is available only to the external partners on the users' contact lists.

What should you do?

- A. From PowerShell, run Set-CsPrivacyConfiguration -EnablePrivacyMode True.
- B. From External collaboration settings in the Azure Active Directory admin center, configure Guest user access restrictions.
- C. From PowerShell, run Set-CsTenantFederationConfiguration AllowFederatedUsers\$false.
- D. From the Microsoft Teams admin center, add the external partners to the Allow only specific external domains list.

Answer: A

NEW QUESTION 6

DRAG DROP - (Topic 5)

You have a Microsoft Office 365 subscription named contoso.com. You need to create the Microsoft teams shown in the following table.

Name	Requirement
Sales	Users can join only once they are approved.
General	All contoso.com users are included automatically.
Projects	Users can join without approval.

What should you configure each team? To answer, drag the appropriate team types to the correct teams. Each team type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION 7

- (Topic 5)

You have a Microsoft 365 subscription that contains several Microsoft SharePoint Online sites.

You need to ensure that the content stored in a SharePoint modern team site named Sales is available from Microsoft Teams. The solution must ensure that when a new channel is added to a team, a folder for the channel is created in the Sales site.

Solution: From the Microsoft Teams client you create a new team and select From a group or team.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 8

- (Topic 5)

You plan to implement Microsoft Teams for 300 users.

For the first stage of the deployment, you will enable the following features:

- Audio
- Video
- Screen sharing

Users will be prevented from using the following features:

- File sharing
- PSTN calling
- Conference audio
- Conference video
- Conference screen sharing

You need to calculate how much network bandwidth is required for the first-stage deployment. What should you use?

- A. Network Assessment Tool
- B. Advisor for Teams
- C. Bandwidth Utilization Analyzer
- D. Network Planner

Answer: D

Explanation:

According to the Microsoft documentation¹, you can use Network Planner in the Microsoft Teams admin center to calculate how much network bandwidth is required for your Teams deployment. Network Planner helps you determine and organize network requirements for connecting your organization to Teams. You can use Network Planner to:

- ? Input your organization's information, such as the number of users, sites, and expected call and meeting scenarios.
- ? Get a report that tells you if your network can support Teams.
- ? Get a report that tells you what network hardware you need to support Teams. To use Network Planner, you need to follow these steps¹:
- ? In the left navigation of the Microsoft Teams admin center, go to Org-wide settings
- > Network planner.
- ? Under Overview, click Download the Network Planner Excel template.
- ? Open the template and enter information about your organization's sites, users, and expected call and meeting scenarios.
- ? Save the template and then upload it in Network Planner.
- ? Under Calculated results, view the reports that show you the estimated network requirements for Teams.

NEW QUESTION 29

- (Topic 5)

You have a Microsoft 365 subscription that uses Microsoft Teams.
 You need to identify which teams were inactive during the past 90 days. What should you use?

- A. Teams advisor
- B. the Office 365 Groups activity report
- C. the Teams user activity report
- D. the Teams usage report

Answer: D

Explanation:

According to the Microsoft documentation¹, you can use the Teams usage report in the Microsoft Teams admin center to get an overview of the usage activity in Teams. This includes the number of active users, channels, guests, and post messages via chat and conversations to know how many users in each team are actively using Teams to communicate and collaborate. However, this report only shows the last 7 or 28 days of activity of teams, which may not be enough to identify inactive teams over a longer period. Alternatively, you can use PowerShell scripts to generate activity reports that check the audit records of inactive teams and provide an HTML report file based on SharePoint site activity in the group's document library in the past 90 days and conversations that occurred in the mailbox in the past year². However, this method requires writing complex and time-consuming PowerShell commands, which may not be feasible for

administrators who need to produce multiple reports on a daily basis.

Another method to detect inactive teams in your Teams environment is by setting an expiration policy for the associated group in Azure AD. This notifies the owner of the team or group by sending an email to renew or delete the team after specified days if no activity is detected³. However, this method also has some drawbacks, such as:

? The owner may fail to notice the email or renew the team within the timeline of the configured policy, resulting in the team being deleted automatically and not being restorable after 30 days.

? The expiration policy applies to all Microsoft 365 groups in an Azure AD organization, not just Teams. This may affect other groups that are not related to Teams.

? The expiration policy requires Azure AD Premium licenses for the members of all groups to which the policy is applied.

Therefore, based on this information, the correct answer is D. the Teams usage report. This report is the most straightforward and accessible way to find inactive teams in Microsoft Teams, even though it has some limitations. The other options are either not related to finding inactive teams (Teams advisor) or require additional licenses or permissions (the Office 365 Groups activity report and the Teams user activity report).

NEW QUESTION 31

HOTSPOT - (Topic 5)

You have a Microsoft 365 subscription that uses Microsoft Teams. You need to meet the following requirements:

NEW QUESTION 86

SIMULATION - (Topic 4)

Task 9

You need to deploy the Microsoft Viva Connections app to Teams and install the app as the first item on the app bar of the Teams client for all users.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To deploy the Microsoft Viva Connections app to Teams and install the app as the first item on the app bar of the Teams client for all users, you need to use the Teams admin center and PowerShell. Here are the steps to follow:

- ? Sign in to the Teams admin center with your Microsoft 365 username and password1.
- ? In the left navigation, go to Teams apps > Manage apps.
- ? Click Upload and then select the Viva Connections app package that you created using PowerShell2. If you have not created the app package yet, you can follow the instructions in this article to do so.
- ? After uploading the app package, click on the app name and then click Publish.
- ? In the left navigation, go to Teams apps > Setup policies.
- ? Select an existing policy or create a new one by clicking Add.
- ? In the Setup policy pane, under Installed apps, click Add apps and then select the Viva Connections app from the list.
- ? Drag and drop the Viva Connections app to reorder it as the first item on the app bar.

? Click Save and then Close.

? To assign the setup policy to all users, you can use PowerShell to run the following cmdlet:

```
Get-CsOnlineUser | Grant-CsTeamsAppSetupPolicy -PolicyName "YourPolicyName"
```

Replace "YourPolicyName" with the name of the policy that you created or modified in step 6.

Note: It may take up to 24 hours for the changes to take effect.

Now, you have deployed and installed the Microsoft Viva Connections app to Teams as the first item on the app bar for all users.

NEW QUESTION 87

SIMULATION - (Topic 4)

Task 12

you need to create a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To create a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels, you need to use PowerShell to create the group and assign the Teams Communications Administrator role to it. Here are the steps to follow:

? Install the Azure Active Directory PowerShell for Graph module by running the following cmdlet: Install-Module -Name AzureAD

? Connect to Azure Active Directory by running the following cmdlet and entering your Microsoft 365 username and password:

```
Connect-AzureAD
```

```
New-AzureADMSGroup -DisplayName "TeamsAdmin" -Description "Group for managing Teams Phone configurations" -MailEnabled $false -MailNickName "TeamsAdmin" -SecurityEnabled $true -GroupTypes "Unified"
```

? Get the object ID of the new group by running the following cmdlet:

```
Get-AzureADMSGroup -Filter "DisplayName eq 'TeamsAdmin'"
```

? Copy the object ID from the output and assign it to a variable, such as \$groupID, by running the following cmdlet:

```
$groupID = "your-object-id"
```

```
Install-Module -Name MicrosoftTeams
```

? Connect to Microsoft Teams by running the following cmdlet and entering your Microsoft 365 username and password:

```
Connect-MicrosoftTeams
```

? Get the role ID of the Teams Communications Administrator role by running the following cmdlet:

```
Get-CsOnlineRole -Identity "Teams Communications Administrator"
```

? Copy the role ID from the output and assign it to a variable, such as \$roleID, by running the following cmdlet:

```
$roleID = "your-role-id"
```

? Assign the Teams Communications Administrator role to the TeamsAdmin group by running the following cmdlet:

```
New-CsOnlineRoleAssignment -SecurityGroupId $groupID -RoleDefinitionName $roleID
```

Now, you have created a Microsoft 365 group named TeamsAdmin that can manage Teams Phone configurations without being able to manage teams and channels. You can add members to this group by using the Azure Active Directory admin center or PowerShell.

NEW QUESTION 88

SIMULATION - (Topic 4)

Task 8

You need to enable shared channel collaboration with microsoft.com. The solution must meet the following requirements:

- Users must be able to participate in shared channels created by microsoft.com.
- Users must be able to invite Microsoft contacts to shared channels created by users at your company.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To enable shared channel collaboration with microsoft.com, you need to use the Teams admin center to configure the channel policy and the cross-tenant access settings. Here are the steps to follow:

? Sign in to the Teams admin center with your Microsoft 365 username and password1.

? In the left navigation, go to Teams > Teams update policies.

? Select an existing policy or create a new one by clicking Add.

? In the Update policy pane, under Shared channels, turn on the toggles for Allow shared channel creation and Allow external shared channel participation. This will allow users to create shared channels and participate in shared channels created by microsoft.com.

? Click Save and then Close.

? In the left navigation, go to Org-wide settings > External access.

? Under Cross-tenant access settings, click Manage settings.

? In the Cross-tenant access settings pane, under Shared channels, select Allow specific domains and then enter microsoft.com in the box below. This will allow users to invite Microsoft contacts to shared channels created by your company.

? Click Save.

Note: You also need to make sure that microsoft.com has configured their cross-tenant access settings to allow shared channel collaboration with your domain. See Collaborate with external participants in a channel2 for more details.

You need to configure only the Teams meeting invites of Allan DeYoung to first show a dial-in bridge number in Toronto, and then show then a dial-in bridge number in Pans in the body of his invites.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To configure the Teams meeting invites of Allan DeYoung to show a dial-in bridge number in Toronto and then a dial-in bridge number in Paris, you can use the Teams admin center to set the phone numbers included on his invites. Here are the steps to follow:

? Sign in to the Teams admin center with your Microsoft 365 username and password1.

? In the left navigation, go to Users and then select Allan DeYoung from the list of users.

? In the user details page, go to Meetings and then click Edit next to Audio Conferencing.

? In the Audio Conferencing pane, under Phone numbers, select Customized from the drop-down menu.

? In the Customized phone numbers box, enter the phone numbers that you want to include on Allan's invites, separated by commas. For example, you can enter: +1 416-555-1234 (Toronto), +33 1 55 55 55 55 (Paris)

? Click Save and then Close.

Now, when Allan DeYoung schedules a Teams meeting, his invites will show the Toronto and Paris dial-in bridge numbers in the body of his invites, in the order that you specified.

NEW QUESTION 126

- (Topic 5)

Your company uses Microsoft Teams and a Microsoft calling plan. The company has a main office in Chicago. The company opens a new office in Toronto that has 500 users. You need to ensure that the correct address is available to emergency responders. What should you do?

- A. Create a calling policy and assign the policy to each user.
- B. Create a configuration profile and assign the profile to the device of each user.
- C. Add an emergency address, and then modify the outbound calling setting for each user.
- D. Add an emergency address, and then modify the location for each phone number.

Answer: D

Explanation:

According to the Microsoft documentation¹, you need to add an emergency address for each location where your users make and receive phone calls. An emergency address is a civic address—the physical or street address of a place of business for your organization. It is used to route emergency calls to the appropriate dispatch authorities and to assist in locating the emergency caller.

After you add an emergency address, you need to assign a phone number to it. You can assign either a user number or a service number. A user number is assigned to a specific user in your organization who makes and receives phone calls. A service number is used for services such as Audio Conferencing (for dial-in numbers), auto attendants, or call queues.

To assign a phone number to an emergency address, you need to modify the location for each phone number. You can do this by using the Microsoft Teams admin center or PowerShell. For example, to modify the location for a user number by using PowerShell, you can use the Set-CsOnlineVoiceUser cmdlet with the -LocationID parameter².

NEW QUESTION 176

- (Topic 5)

You have a Microsoft 365 subscription. You plan to implement Microsoft Teams. You need to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion. You install the Network Testing Companion module on a local Windows 10 device. Which additional software should you install to perform the tests?

- A. the Microsoft Teams desktop client
- B. Network Assessment Tool
- C. Windows Assessment Toolkit
- D. Windows Performance Analyzer (WPA)

Answer: B

Explanation:

According to the Microsoft documentation¹, the Network Testing Companion is a PowerShell module that allows you to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion. The Network Testing Companion module requires the following software to be installed on the local Windows 10 device:

- ? PowerShell 5.1 or later
- ? .NET Framework 4.7.2 or later
- ? Microsoft Teams Network Assessment Tool

The Microsoft Teams Network Assessment Tool is a tool that tests the connectivity to various Teams servers deployed in the Microsoft Azure network. It measures network performance by streaming packets to the nearest edge site and back for a configurable amount of time².

Therefore, based on this information, the correct answer is B. Network Assessment Tool. This tool is required to perform network quality and connectivity tests by using the Network Testing Companion module. The other options are either not related to network testing (the Microsoft Teams desktop client and Windows Performance Analyzer) or not required for the Network Testing Companion module (Windows Assessment Toolkit).
