

Fortinet

Exam Questions FCSS_CDS_AR-7.6

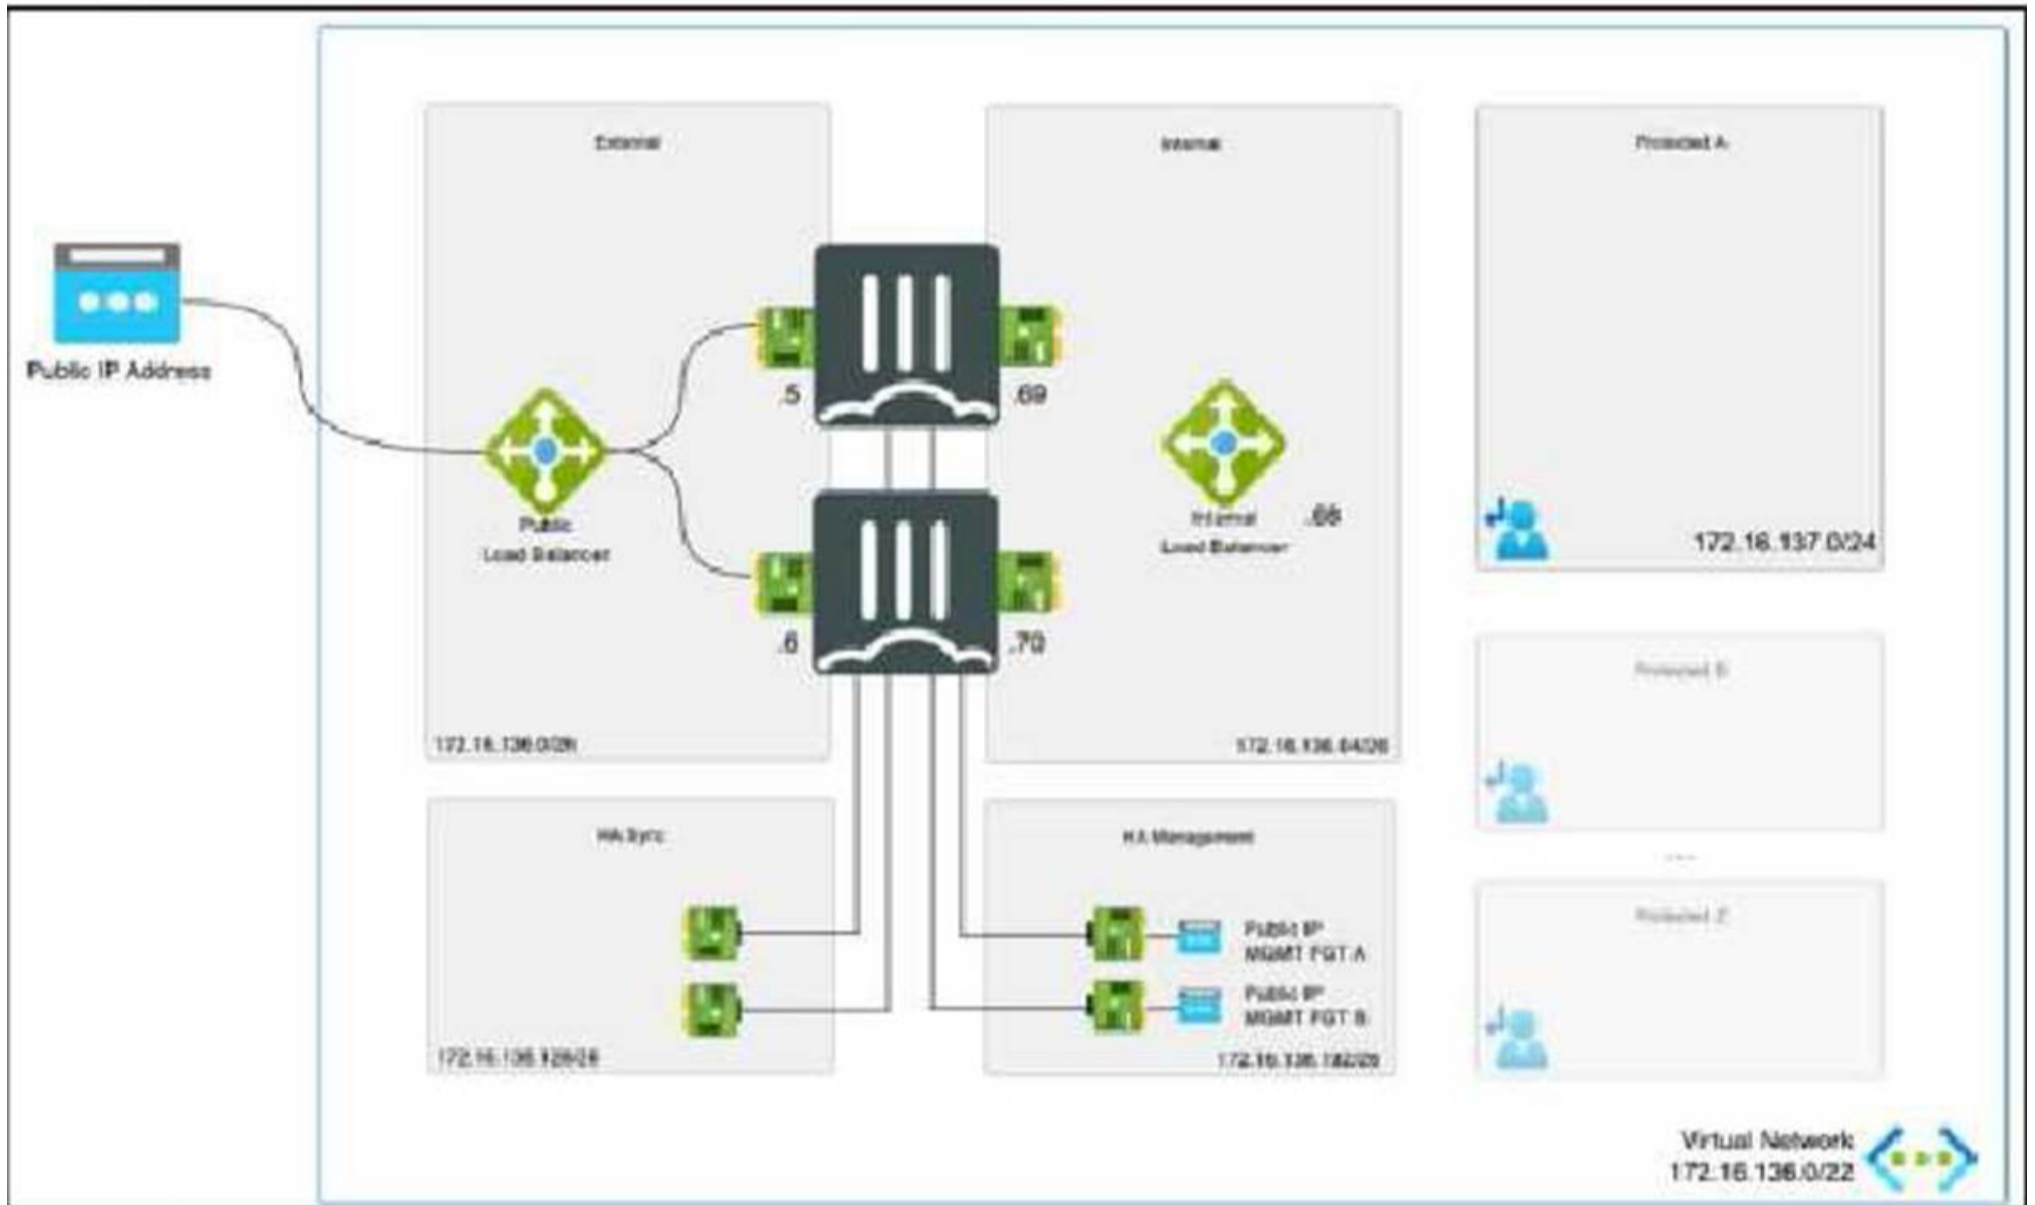

FCSS - Public Cloud Security 7.6 Architect

NEW QUESTION 1

Refer to the exhibit.

HA Topology

The exhibit shows an active-passive high availability FortiGate pair with external and internal Azure load balancers. There is no SDN connector used in this solution.

Which configuration must the administrator implement on each FortiGate?

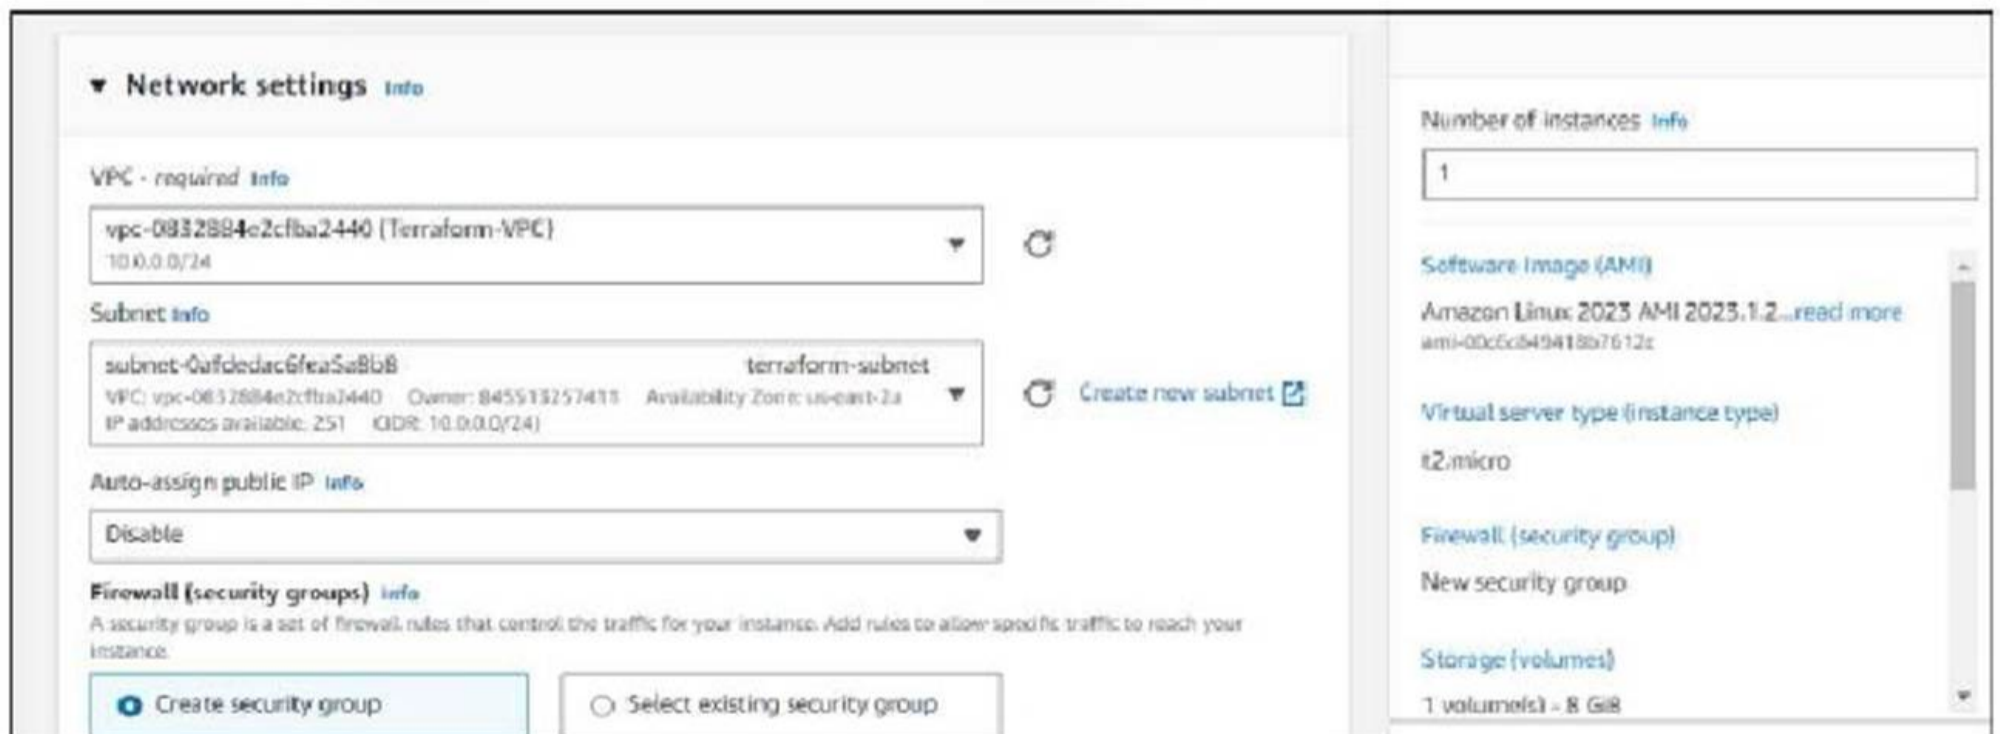

- A. Single BGP route to Azure probe IP address.
- B. One static route to Azure Lambda IP address.
- C. Two static routes to Azure probe IP address.
- D. Two BGP routes to Azure probe IP address.

Answer: C

NEW QUESTION 2

Refer to the exhibit.

Network settings

You have deployed a Linux EC2 instance in Amazon Web Services (AWS) with the settings shown on the exhibit. What next step must the administrator take to access this instance from the internet?

- A. Allocate an Elastic IP address and assign it to the instance.

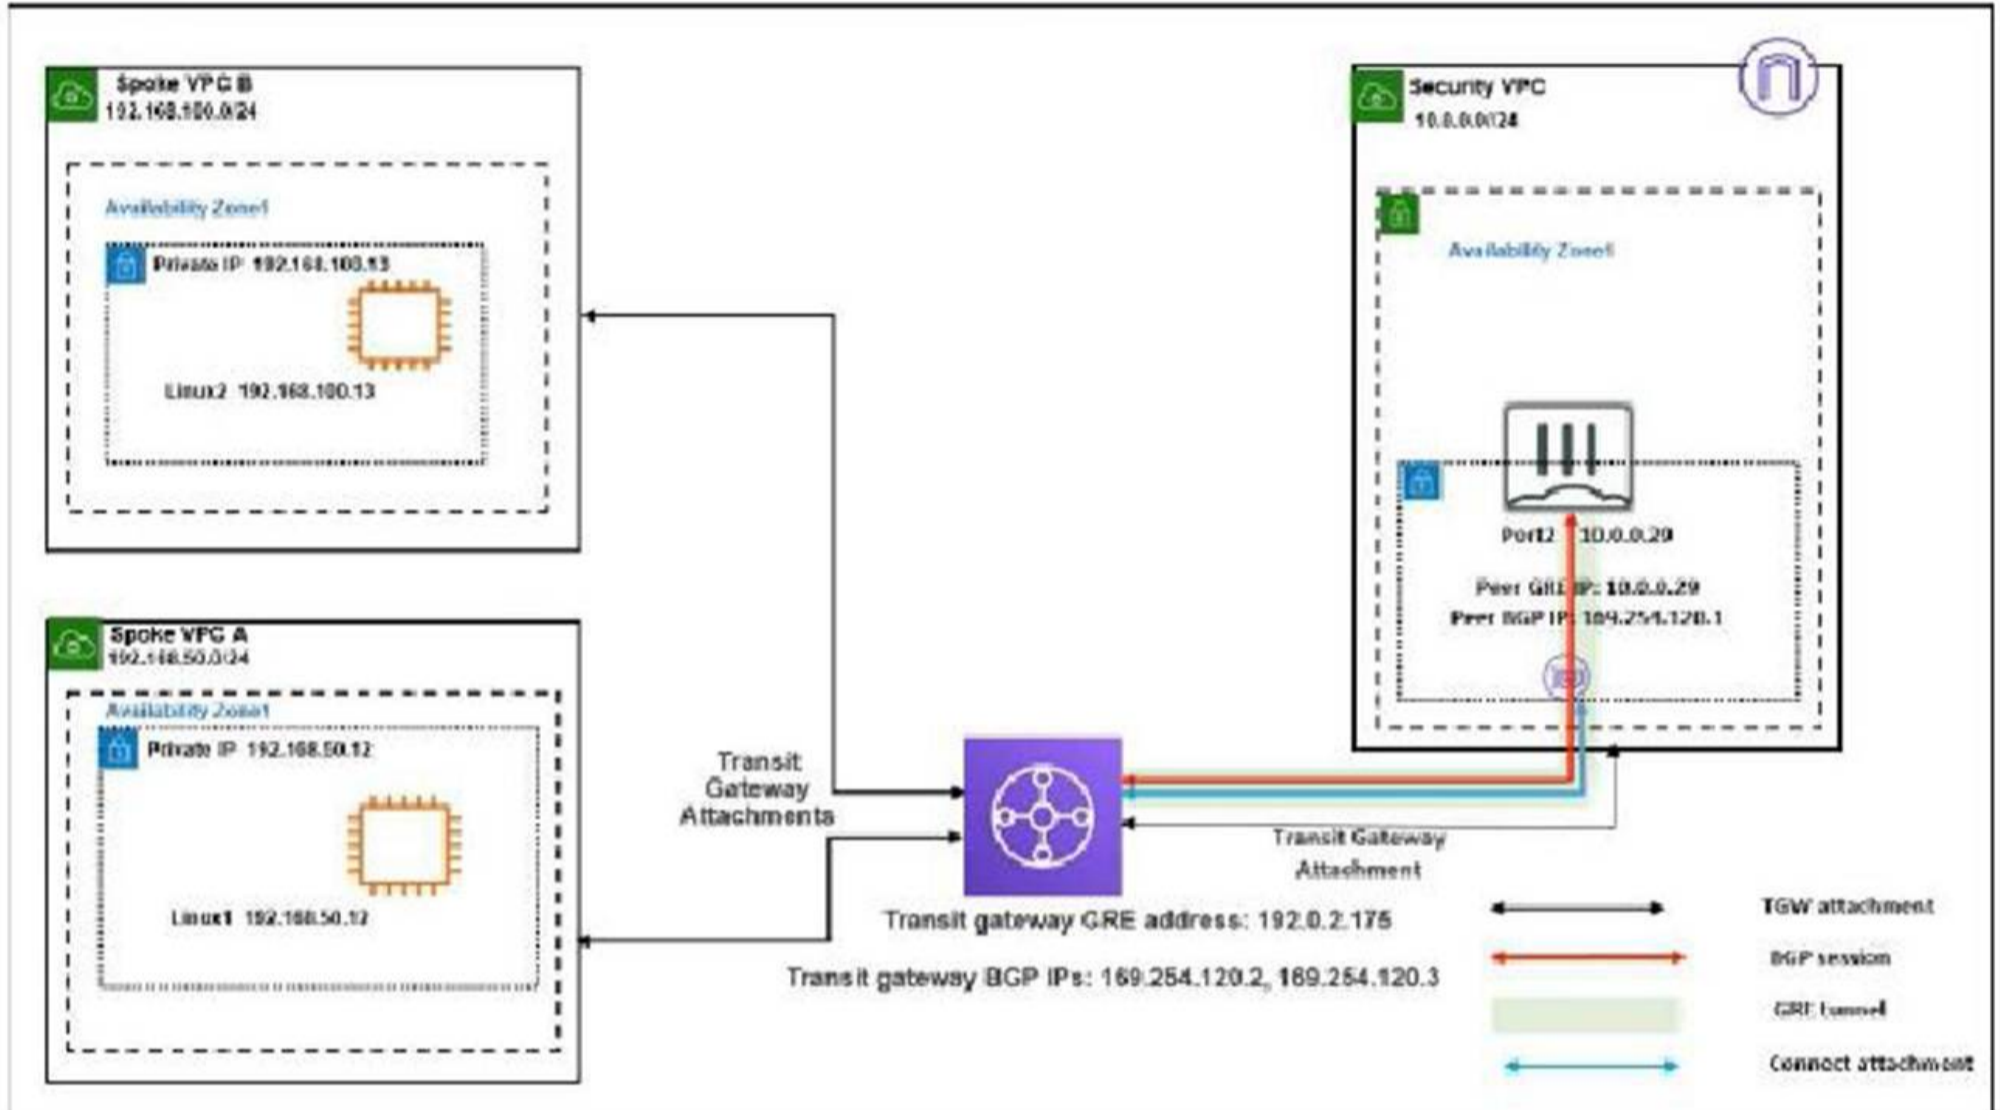

- B. Create a VIP on FortiGate to allow access.
- C. Enable SSH and allocate it to the device.
- D. Configure the user name and password.

Answer: A

NEW QUESTION 3

Refer to the exhibit.

Network Topology

You attempted to access the Linux1 EC2 instance directly from the internet using its public IP address in AWS. However, your connection is not successful. Given the network topology, what can be the issue?

- A. There is no connection between VPC A and VPC B.
- B. There is no internet gateway attached to the Spoke VPC A.
- C. The Transit Gateway BGP IP address is incorrect.
- D. There is no elastic IP address attached to FortiGate in the Security VPC.

Answer: B

NEW QUESTION 4

An AWS administrator must ensure that each member of the cloud deployment team has the correct permissions to deploy and manage resources using CloudFormation. The administrator is researching which tasks must be executed with CloudFormation and therefore require CloudFormation permissions. Which task is run using CloudFormation?

- A. Deploying a new pod with a service in an Elastic Kubernetes Service (EKS) cluster using the kubectl command
- B. Installing a Helm chart to deploy a FortiWeb ingress controller in an EKS cluster
- C. Creating an EKS cluster with the eksctl create cluster command
- D. Changing the number of nodes in a EKS cluster from AWS CloudShell

Answer: D

NEW QUESTION 5

You are using Ansible to modify the configuration of several FortiGate VMs. What is the minimum number of files you need to create, and in which file should you configure the target FortiGate IP addresses?

- A. One playbook file for each target and the requiredtasks, and one inventory file.
- B. One .yaml file with the targets IP addresses, and oneplaybook Tile with the tasks.
- C. One inventory file for each target device, and one playbook file.
- D. One text lite for all target devices, and one playbook file.

Answer: B

NEW QUESTION 6

A network security administrator is searching for a solution to secure traffic going in and out of the container infrastructure. In which two ways can Fortinet container security help secure container infrastructures? (Choose two.)

- A. FortiGate NGFW can inspect north-south container traffic with label-aware policies.
- B. FortiGate NGFW and FortiWeb can be used to secure container traffic.

- FortiGate NGFW can connect to the worker nodes and protect the containers.
- A. FortiGate NGFW can be placed between each application container for north-south traffic inspection.
- B.

Answer: AB

NEW QUESTION 7

As part of your organization's monitoring plan, you have been tasked with obtaining and analyzing detailed information about the traffic sourced at one of your FortiGate EC2 instances. What can you do to achieve this goal?

- A. Use AWS CloudTrail to capture and then examine traffic from the EC2 instance.
- Create a virtual public cloud (VPC) flow log at the network interface level for the EC2 instance.
- A. Add the EC2 instance as a target in CloudWatch to collect its traffic logs.
- B. Configure a network access analyzer scope with the EC2 instance as a match finding.
- C.

Answer: B

NEW QUESTION 8

An administrator decides to use the Use managed identity option on the FortiGate SDN connector with Microsoft Azure. However, the SDN connector is failing on the connection. What must the administrator do to correct this issue?

- Make sure to add the Client Secret on the FortiGate side of the configuration.
- A. Make sure to add the Tenant ID on the FortiGate side of the configuration.
- B. Make sure to set the type to system managed identity on FortiGate SDN connector settings.
- C. Make sure to enable the system-assigned managed identity on Azure.

Answer: C

NEW QUESTION 10
